## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>Intellia AI</b> , Machine Learning Engineer Intern<br>Owned the design and deployment of an end-to-end agentic AI platform for automated research and technical due diligence. <ul style="list-style-type: none"><li>Built production RAG pipelines using LangChain, Pinecone, and FastAPI</li><li>Reduced research turnaround from ~1 week to under 5 minutes</li><li>Deployed containerized ML services on GCP with Docker and CI/CD</li><li>Implemented evaluation and safety checks aligned with Responsible AI</li></ul> | Remote<br>May 2025 – Sept 2025<br>5 months  |
| <b>Khudi Ventures (Dil Ka Rishta)</b> , Machine Learning Engineer Intern (Recommender Systems)<br>Built large-scale personalization and matchmaking systems. <ul style="list-style-type: none"><li>Designed matching algorithms over 1M+ user profiles using graph models</li><li>Applied reinforcement learning with sentiment-based reward modeling</li><li>Achieved ~30% increase in user engagement via A/B testing</li></ul>                                                                                                | Remote<br>June 2024 – Sept 2024<br>4 months |

## Startups & Products

|                                                                                                                                                                                                                                                                                                                                                   |                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>NEVA (Navigating Education Via AI)</b> , Co-Founder / Lead ML Engineer<br>AI-native educational platform for contextual, multimodal learning. <ul style="list-style-type: none"><li>Full-stack system using Next.js, FastAPI, Docker</li><li>Agentic RAG with confidence-aware multi-LLM routing</li><li>80+ active university users</li></ul> | Nov 2024 – present  |
| <b>DEXA</b> , Creator<br>Natural-language-driven data analysis agent. <ul style="list-style-type: none"><li>Created DataExplainBench benchmark</li><li>Improved code generation success from 88% to 99.3%</li></ul>                                                                                                                               | Feb 2025 – May 2025 |

## Research

|                                                                                                                                                                                                                                                                                 |                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>SEHAS Lab, Dartmouth College</b> , Researcher<br>Research on alignment and interpretability of learning systems. <ul style="list-style-type: none"><li>Reinforcement learning for policy alignment</li><li>Mechanistic interpretability of learned representations</li></ul> | Dec 2025 – present  |
| <b>NYU MAPS Lab</b> , Researcher<br>Multimodal personalization and retrieval-augmented generation. <ul style="list-style-type: none"><li>Audio-visual sentiment modeling</li><li>Knowledge-aware retrieval pipelines</li></ul>                                                  | Oct 2024 – present  |
| <b>New York University</b> , Undergraduate Researcher (DURF)<br>Vision-language modeling research. <ul style="list-style-type: none"><li>BLIP-VQA fine-tuning with LoRA</li><li>MAE-BERT cross-attention architecture</li><li>+2.37% accuracy on COCO VQA</li></ul>             | May 2024 – Aug 2024 |

## Education

|                                               |                                                       |
|-----------------------------------------------|-------------------------------------------------------|
| <b>Dartmouth College</b> , Computer Science   | Hanover, NH, USA<br>Sept 2025 – June 2027             |
| <b>New York University</b> , Computer Science | New York, NY / Shanghai, China<br>Aug 2021 – May 2025 |
